MID-INTERNSHIP PROGRESS REPORT

AI & Automation Internship

Internship Start Date	1 August 2026
Report Type	Mid-Internship Progress Report

1. Introduction

I am very grateful for the opportunity to be part of this internship program. Since starting my internship on 1 August 2026, I have gained valuable hands-on experience in Prompt Engineering, Claude Skill Creation, and n8n Workflow Automation.

This internship has helped me move from theoretical understanding to practical implementation of AI and automation solutions. I appreciate the guidance and support provided by the team and look forward to continuing my learning and becoming a valuable asset to the organization.

2. Tasks Completed So Far

2.1 Prompt Engineering

My first assigned task was to create 8 different prompts using different AI platforms: ChatGPT, Claude, Gemini, Kimi, Grok, Perplexity, DeepSeek, and Microsoft Copilot.

Through this task, I learned how to create clear, structured, and practical prompts by providing proper context, instructions, and expected outputs.

Key learning: Prompt structure, context setting, role assignment, and output specification.

2.2 Claude Skill Creation

The second task was to create 4 custom skill files for Claude. I learned how to create structured and reusable instructions that enable Claude to perform specific tasks consistently.

I worked on defining each skill's purpose, instructions, working process, benefits, and practical applications.

Key learning: Custom AI skills, structured instructions, reusable AI capabilities, and AI task customization.

2.3 n8n Workflow Development

I then started working with n8n, a workflow automation platform. This gave me hands-on experience in creating workflows and understanding how different services can be connected and automated.

I gained exposure to workflows and nodes, triggers and actions, APIs, webhooks, HTTP requests, data processing, automation logic, testing, and troubleshooting.

3. Project Completed – Weather Digest Bot

As part of my n8n learning, I created a Weather Digest Bot, an automation that regularly provides users with current weather information.

The basic workflow is: Trigger → Weather Data → Processing → Weather Digest → Notification.

This project helped me understand how external information can be retrieved, processed, and automatically delivered to a user. It provided practical experience in building an end-to-end automation workflow.

4. Current Project – WhatsApp Chat Support Automation

Currently, I am working on a WhatsApp Chat Support System using n8n. The objective is to develop an automated customer-support workflow that can receive WhatsApp messages, process customer queries, generate appropriate responses, and send those responses back to customers.

The basic workflow is: Customer → WhatsApp → Webhook → n8n → Message Processing → Response → Customer.

Through this project, I am gaining deeper practical knowledge of WhatsApp integration, webhooks, APIs, n8n, message processing, automated responses, and customer-support automation.

This project is currently in progress and will be one of my main learning objectives for the next phase of the internship.

5. Skills Developed

Area	Skills
AI	Prompt Engineering & AI Platforms
Claude	Custom Skill Creation
Automation	n8n Workflow Development
Integration	APIs & Webhooks
Problem Solving	Testing & Troubleshooting
Customer Support	WhatsApp Automation

6. Future Goals

- Complete the WhatsApp Chat Support Automation.
- Develop more advanced n8n workflows.
- Improve my knowledge of APIs and webhooks.
- Explore AI chatbots and AI agents.
- Learn more about AI-powered business automation.
- Build practical solutions for real-world business use cases.

7. Conclusion

So far, this internship has been a valuable and practical learning experience. I have progressed from Prompt Engineering to Claude Skill Creation and then to n8n Workflow Automation.

The Weather Digest Bot gave me practical experience in building an automation, while the current WhatsApp Chat Support project is helping me understand more advanced AI and automation integrations.

I am thankful to the team for providing me with this opportunity and guidance. I look forward to using the remaining part of my internship to further improve my skills, complete more challenging projects, and contribute meaningfully to the organization.

Thank you for giving me the opportunity to learn, grow, and develop my skills in AI Automation.
